SKILLS

Penetration Testing: Web application testing, directory brute-forcing, vulnerability assessment, CTF challenge solving

Programming & Scripting: Proficient in C, Python, Bash; beginner experience in PHP, JavaScript, Node.js

System Hardening & Linux Security: Experience with Born2beroot project, VirtualBox setups, Debian system configuration

Security Concepts: Authentication, authorization, session management, encryption, privilege escalation

EDUCATION

Baccalaureate (High School Diploma equivalent)

IBN MANDOUR

2021

Software engineer

1337 (42 network)

2024 - present

- Intensive project-based program focused on system programming, cybersecurity, algorithms, and software engineering.
- Key Projects: libft, get_next_line, minishell, philosophers, so_long, cub3D, Born2beroot.
- Gained strong experience in C, C++, Linux, networking, multithreading, and secure coding.

LANGUAGES

Arabic

French

English

PROFILE

Motivated and hands-on Cyber Security Consultant with a strong foundation in offensive security, CTF challenges, and secure system configuration. Skilled in vulnerability assessment, web penetration testing, and secure data transfer between systems. Proven experience developing custom security tools using Python and C, and contributing to bug bounty platforms such as WePwn. Currently enrolled at 1337 School with a focus on advanced cybersecurity projects, including network hardening, exploit development, and malware analysis.

WORK EXPERIENCE

Security researcher

WePwn

Remote | 2025 – Present

- Conduct vulnerability research and penetration testing on web applications and APIs.
- Analyze and exploit security flaws such as SQL Injection, XSS, SSRF, IDOR, and authentication bypass.
- Perform reconnaissance, fuzzing, and proof-of-concept exploit development.
- Document findings with detailed technical reports and remediation recommendations.
- Collaborate with the WePWN community to share insights, techniques, and responsible disclosures

PROJECTS

r0z0_brute_force – Web Directory Brute Forcer (Python)

- Developed a custom brute force tool to automate directory and file discovery during web penetration tests.
- Implemented error handling, multithreading, and logging to improve speed and accuracy.

Minishell (C, 42 School)

- Built a UNIX-like shell supporting pipes, redirections, environment variables, and command parsing.
- Gained experience with system calls, process management, and secure memory handling.

Cub3D – Raycasting Engine (C, 42 School)

- Implemented a 3D rendering engine using raycasting (similar to Wolfenstein 3D).
- Integrated a 2D minimap, DDA algorithm for wall detection, and keyboard hooks.

Born2beroot – System Security Project (Debian)

- Built and hardened a Debian-based virtual machine with strict security policies.
- Configured user management, SSH security, password policies, and firewall rules.

PLATFORMS

TryHackMe | <https://tryhackme.com/p/r0z0x>

- Learned practical penetration testing techniques through hands-on labs.
- Exploited vulnerabilities including SQL Injection, XSS, Command Injection, and Privilege Escalation.
- Completed paths covering networking, Linux fundamentals, and web exploitation.

PortSwigger Web Security Academy

- Studied in-depth web application vulnerabilities such as Authentication Bypass, IDOR, CSRF, and Business Logic flaws.
